

## DO2-01D1

Digital Output module

6.8.2007

---

### Features

- Dual channel Digital Output module
- Can switch 80mA AC/DC loads
- Isolated
- Open collector outputs
- Standard Din rail enclosure
- Full duplex output
- Linet connection

### Application

- Relay driver
- Door lock interface
- Alarm systems
- Industrial control systems

### Description

DO2-01D is dual output module for digital signals. The two channels are isolated from each other. Outputs have individual connectors and can be used simultaneously. Outputs are open collector type and have drive ability up to 24V / 80mA ac/dc.

### Instructions

CAT6 type Linet cable shall be connected to the network connector. After system is powered up the module can be configured as I/O group type or delay group type, depending of the application.

### *Technical specifications*

Parameter	Value	Unit
Output current	80	mA
Open collector voltage tolerance	+24	V dc/ac
Operating temperature	-20 ...+50	Celsius
Dimensions	90 x 17 x 60	mm

### *Ordering*

DO2-01D          Dual channel Digital Output module
